RE: March Schedule

For the next couple of weeks, I will be concentrating on preparing the Executive Budget. I will be working from my home. While I will not be present in the Board room, I will listen in from time to time over the telephone.

I understand you will be sending me your written comments and recommendations via Hank for my consideration as I prepare the Executive Budget. I appreciate and look forward to your input.

The after effects of my treatment are more than I anticipated, but I am regaining my strength and am looking forward to returning to the Board room. I appreciate you keeping me in your thoughts and prayers.

March 23, 1993

Honorable Gladys McCoy
Multnomah County Chair
1120 SW 5th Avenue, Room 1410
Portland, Oregon 97204

Dear Chair McCoy:

I am happy to report that the Alarm Ordinances being administered by the Multnomah County Sheriff's Office are proving to be quite successful. Our records indicate that while the number of alarm users in Multnomah County has steadily increased, the number of false alarms in Multnomah County has decreased significantly over the last several years.

In 1992, there was a 13% decrease in false alarms compared to 1991 false alarm statistics. Historically, the decrease in false alarms is even more dramatic. In 1989, the police in Multnomah County responded to 34,848 false alarms. In 1992, the number of false alarms totalled 21,401. This illustrates a 39% reduction in three years, 13,447 fewer false alarm calls. This significant reduction can be attributed to the concerted effort the alarm users, the alarm industry, and the local law enforcement agencies have made to reduce false alarms.

Multnomah County Sheriff's Office is certainly pleased with these results. The Alarm Ordinance Unit recently hired a part-time Alarm Information Officer, Ms. Kelly Mott, to begin a community outreach program on false alarm prevention for all areas outside the City of Portland. We believe this education component will enhance all of the alarm ordinances in Multnomah County and will further reduce false alarms.

Sincerely,

ROBERT G. SKIPPER
Sheriff

ALARM EFFECTIVENESS AND FALSE ALARM REDUCTION

PRESS CONFERENCE

MARCH 22, 1993

AGENDA

1. Welcome and introductions. (Sergeant Derrick Foxworth, Public Information Officer, Portland Police Bureau)
2. Reduced call load; reduced property loss at alarmed locations; more time spent Community Policing. (Chief Tom Potter, Portland Police Bureau)
3. The alarm industry's partnership role in reducing false alarms. (Mr. Bob Thompson, President, Oregon Burglar and Fire Alarm Association)
4. The collective effort of law enforcement, alarm users, and the alarm industry; the Multnomah County Alarm Ordinance Task Force; increased morale in law enforcement due to collective efforts to reduce false alarms. (Sheriff Bob Skipper, Multnomah County)
5. The administration of the alarm ordinance; stiffer fine structure and its positive effect; more timely notification of false alarms. (Kelly Mott, Alarm Information Officer, Multnomah County Sheriff's Office)
6. Property losses in alarmed versus not alarmed residences; False Alarm Notification Stickers (FANS) and other outreach programs. (Officer Bob Tilly, Alarm Information Office, Portland Police Bureau)
7. Changes in procedures for alarm monitoring and service; alarm customer education and ongoing training of alarm industry companies and employees. (Mr. Bob Thompson, President, Oregon Burglar and Fire Alarm Association)
8. Open for questions.

ALARM ORDINANCE SUMMARY

The Multnomah County Sheriff's Office administers the alarm ordinances for unincorporated Multnomah County and all cities within the county. The alarm ordinances were implemented in 1975 to protect emergency services from an excessive call load. The ordinances require a permit for all burglary and robbery alarm systems. Significant revisions in 1989 and 1991 included:

- ▶ Increasing the permit fee from \$8 to \$12 per year (the \$4 increase is used for funding outreach programs). Residential alarm-users over 62 are exempt from permit fees.
- ▶ Changes in the fine structure: 1st false alarm - no fine; 2nd and 3rd false alarm - \$50; 4th false alarm - \$100 and suspension of police response (reinstatement may occur if corrective action has been taken); 5 or more false alarms - \$100 each.
- ▶ A false alarm hearing process was instituted.
- ▶ An alarm system may not emit sound for more than 15 minutes.

THE MULTNOMAH COUNTY ALARM ORDINANCE TASK FORCE

The task force is made up of the seven jurisdictions within Multnomah County: the cities of Portland, Troutdale, Fairview, Wood Village, Maywood Park, and Gresham, Multnomah County, and a representative from the Oregon Burglar and Fire Alarm Association. The task force meets periodically to review the current alarm ordinances and makes recommendations to improve their effectiveness.

MULTNOMAH COUNTY ALARM ORDINANCE UNIT

The Alarm Ordinance Unit is responsible for the following: issuing permits to alarm users, processing false alarm notices in a timely manner, and collecting fines imposed for false alarms. In 1989 the Alarm Ordinance Unit became computerized and began processing all alarm records, permits, and false alarm notifications electronically. The addition of computers greatly improved the efficiency of the notification process and helped reduce false alarms.

**PRESS CONFERENCE SUPPLEMENT
PAGE 2**

PORTLAND POLICE BUREAU, ALARM INFORMATION UNIT OUTREACH PROGRAM

Portland Police Officer assigned in 1991 to develop contacts with the community and the alarm industry, provide educational programs, and trouble shooting of those systems that have excessive false alarms.

FALSE ALARM NOTIFICATION STICKERS

False Alarm Notification Stickers (FANS) are left by officers to give immediate notice to the owner that a false alarm occurred.

ALARM INDUSTRY ACTIVITIES

The alarm industry in the Portland metro area consists of over 100 companies who either install and/or monitor alarm systems.

The Oregon Burglar and Fire Alarm Association (OBFAA) maintains false alarm reduction as a top priority on its agenda and has initiated:

- ▶ Formation of the False Alarm Reduction and Management committee (FARM) to assist their employees in false alarm prevention.
- ▶ Increased false alarm awareness and training.
- ▶ Changes in procedures for alarm monitoring and service.
- ▶ Communication with law enforcement to identify specific areas where false alarm reduction can be achieved.

STATS AND FACTS

- ▶ In 1992 residences in the City of Portland without alarm systems lost \$7,243,843 more in property than residences with alarm systems.
- ▶ During 1992 the Portland Police Bureau saved time equal to six full-time officers due to the reduction in false alarms.
- ▶ False alarms were reduced by 36% over four years (1988-1992) while the number of alarm systems increased by 26%.
- ▶ The average number of false alarms per user in 1992 was .58 compared to 1.14 in 1988 and 2.85 in 1975.
- ▶ The number of alarm permits issued has increased from 4,000 in 1975 to 36,663 in 1992. As of February 1993, 36,968 alarm permits are on file.

ZERO FALSE ALARMS

Zero false alarms for each alarm user is **THE** goal. Through the collective efforts of local law enforcement agencies and the alarm industry we are closer to achieving the goal. Our exemplary efforts in reducing false alarms through innovative prevention programs is what makes us a role model for other cities across the country. And we feel we are just beginning...

PERMIT TO FALSE ALARM COMPARISON

MULTNOMAH COUNTY ALARM ORDINANCE

HISTORIAL PERSPECTIVE

1975 - 1989

Permit Fee: \$8.00

Over 65 years old -
Exempt from fee

FINES:

5th False Alarm - \$ 40.00

10th False Alarm - \$100.00

15th False Alarm - \$180.00

1989 - 1991 FIRST REVISION

Permit Fee: \$8.00

Over 62 years old -
Exempt from fee

FINES:

1st, 2nd, 3rd False Alarm - no fine

4th False Alarm - \$50.00

5th False Alarm - no fine

6th thru 9th False Alarm - \$50.00
each

10 or more False Alarms - \$100.00
each

Police response suspended after
10th False Alarm

Letter of Reinstatement required

Appeal Process

1991 - PRESENT SECOND REVISION

Permit Fee: \$12.00

Over 62 years old -
Exempt from fee

FINES:

1st False Alarm - no fine

2nd & 3rd False Alarm - \$ 50.00

4th & more False Alarm - \$100.00
each

Police response is suspended after
4th False Alarm

Letter of Reinstatement is required

What System Is Best ?

Once you've made the decision to invest in an alarm system, you need to assess your own security needs before shopping for a system and an alarm system company. The more companies you talk to the better. Before you can interview alarm system companies in a knowledgeable fashion, you should ask yourself a few questions. That way you can match your specific needs to their unique benefits.

These are some questions you should consider:

What is my alarm system budget? _____

How many possible break-in points does my house have? _____

Would my system protect primarily people or property? _____

Are my neighbors going to respond to an audible alarm? _____

If I have pets will they be indoors? _____

Do particular rooms have more easily-stolen valuables (ie, stereo room)? _____

Who will be operating the system? _____

Will my residence be occupied or unoccupied most of the day? _____

Do I want to buy or lease a system? _____

How Do Home Alarm Systems Work ?

All alarm systems have three basic functions:

System Control

A system will have an arming station allowing you to set it on a variety of levels. "Off" shuts off all system sensors and is used when people are home and going in and out of exterior doors or opening windows. "Away" activates all of the system's sensors and is only used when no one is home. "Home" activates only the sensors which guard exterior doors and windows, allowing you to move around inside the house and still be protected.

Detection

The most basic function of any alarm system is detection. An alarm system can have a variety of sensors linked to the system control. Specialized and highly sensitive sensors detect a variety of events: Someone opening a door or window, someone walking through a specific area, smoke, a medical emergency, water pipes beginning to freeze, and the temperature inside the house. Alarm systems can employ "wired" or "wireless" technology to link sensors to the main control. A reputable alarm system company will be able to fit you with reliable technology for your situation.

Alerting & Reaction

When an alarm system is set off it sounds an audible alarm. The interior and/or exterior siren frightens an intruder or warns of fire. At the same time, if your system has monitoring, it will send an alert to its monitoring station where a trained operator will notify law enforcement or emergency services.

What Makes A Good System ?

Important things to look for when considering a system:

- ✓ **Is the alarm system company reputable?** You can check with the Better Business Bureau or the office of the Attorney General to see if any complaints have been filed against the company. Find out if the company is a member of an alarm association.
- ✓ **What warranties come with the system?** How long is it designed to last? Get specifics about parts and labor coverage. Find out about the company's service hours.
- ✓ **What are the charges after the warranty expires?**
- ✓ **How long do I have to wait if I need service?**
- ✓ **How long will the emergency back-up battery work after AC power loss?**
- ✓ **In case of system malfunction, how is the system user alerted?**
- ✓ **What additional protection can be purchased to lessen the chance of a system being defeated?**
- ✓ **How easy is the system to operate?**
- ✓ **Are system instructions easy to understand?**

When A System Cries "Wolf"

(or Why A False Alarm Should Never Be Allowed)

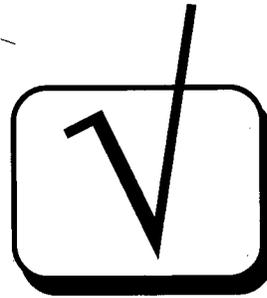

The call goes out over the police radio and a patrol car is dispatched. The officers rush to the scene expecting to find a crime in progress. What they find is a homeowner who was careless with his system—false alarm. False alarms divert valuable police patrol time and law enforcement dollars. Many communities are now levying heavy fines for false alarms law enforcement responds to.

An alarm system links you into an emergency response network, giving your home and family better protection. But that also means owning an alarm system carries a responsibility. Everyone who has an alarm system must be careful to avoid false alarms which take police and fire services from real emergencies. False alarms can actually aggravate the crime problem.

Fortunately, false alarms are easily avoided when a system is used properly:

- Select a reliable and responsible company to install and service your alarm system.
- Make sure all doors and windows with sensors are completely secured before turning your alarm system on. A door that isn't properly closed can pop open after the system has been activated, causing a false alarm.
- Be sure that everyone who will be using the alarm system knows how to work it properly—and what to do if the system is set off accidentally.
- Review the system instructions periodically. Call the alarm system company with any questions.
- Have your alarm system tested periodically to ensure against equipment malfunction.
- Make sure you comply with local law enforcement alarm ordinances.
- Instead of learning from experience, ask your alarm system company about the most common mistakes people make when operating your particular system.
- For more information on home alarm systems, contact your local law enforcement office or a local alarm system company.

How to Select a Home Alarm System.

Shutting Down Crime In Your Neighborhood

With the growth of our communities has come a growth in crime. More than ever, law enforcement and community leaders are looking for ways to make it more difficult for criminals to operate. Civic and law enforcement authorities agree: The best way to lower crime in a community is for citizens to get involved. For example, Neighborhood Watch programs, where neighbors look out for one another have been successful in deterring a wide range of crime. Each household can dramatically decrease its chances of being victimized by taking basic security measures, such as properly secured doors and windows and adequate outdoor lighting. Now technology has brought us another security method, affordable home alarm systems—a way for our homes to be protected every hour of the day and night.

The majority of law enforcement agrees: A home alarm system is one of the most effective deterrents to crimes involving forced entry. When used in combination with security measures like deadbolt locks, a house with an alarm system has a much better chance of avoiding break-ins.

START WITH STEP TWO

Congratulations. You've just taken the first big step toward personal safety, property security and fighting crime. You've installed a burglar alarm. Your alarm system is one of the best ways to prevent your home or business from being burglarized.

Now you must take a *second important step* to get the most out of your investment. You must take precautions to prevent false alarms.

THE BURGLAR'S FRIENDS

Burglars like false alarms. Professional criminals know that today's police agencies are strained to the limit. Sometimes, available police patrols are hard pressed to meet the demands made on them. False alarms can and do divert police personnel away from actual burglaries in progress. The more alarm calls there are, the slower the response time. A flood of false alarms could log jam a police agency, meaning there could be no response at all.

False alarms also work for burglars by desensitizing your first line of defense - alert neighbors. Even in today's busy world, watchful neighbors often become aware of suspicious individuals or activities before a burglary begins. Many alarm systems are intended to ward off burglars by alerting nearby neighbors with their sound. Frequent false alarms can cause neighbors to tune out this warning sound.

False alarms add to the cost of your protection in other ways, besides slowing police response. Usually neighbors ignore those alarms which frequently ring. In addition, false alarms may cause alarm companies to increase their costs. These costs in turn must be passed back to all alarm service subscribers. Also, there are public service costs when fire departments or ambulances are called out for false alarms.

To combat false alarms, some jurisdictions impose fines on the alarm owners, but let's face it, fines, higher service fees, overloading police resources mean nothing compared to the violation of a burglary. Make your alarm system protect you. **Don't be a burglar's friend.**

TARGET: ZERO FALSE ALARMS

Almost every small child knows not to turn in a false fire alarm. The youngest grade school kids can describe the potential dangers of making just one false fire alarm. In contrast, police agencies have found that many adults do not view a false burglary alarm originating from their system as seriously as they view a false fire alarm.

So widespread is this belief that most alarm calls turn out to be false. That's why your local law enforcement agencies and the Oregon Burglar and Fire Alarm Association have joined forces to produce this brochure. Our goal should be your goal too: **to work for ZERO false alarms.**

ZERO false alarms is an obtainable goal. To reach it simply means that you, as an alarm system owner, your alarm service company, and the police agency working to protect you must join together as a team. Teamwork of this kind is in everyone's interest.

DISARMING THE ALARMISTS

Since this brochure is about preventing false alarms, it might not seem the place for listing the reasons and/or excuses people give when they aid or abet a false alarm. Yet there is something to be learned from the experience of others to help reach your goal of zero false alarms.

When an alarm is triggered, investigating officers arrive on the scene ready to begin looking for a crime in progress, or evidence that a burglary has taken place. A pried or broken door or window, or an individual seen running from the scene are convincing evidence that a crime may have been committed or attempted. Anything less than physical evidence or eyewitness accounts must be considered a false alarm.

Here are some reasons for false alarms:

- Wind blew door open
- Pet activated a sensor
- Domestic worker untrained about the system
- Repair persons unaware of an alarm system
- Malfunctioning sensors
- Wrong system for type of usage

One factor ties all these reasons together: **All are preventable.** There isn't one of these "rea-

sons" that couldn't have been corrected before it resulted in a false alarm.

Studies show nearly 60 percent of false alarms are traceable to user errors, while the remaining occurrences attributed to equipment failure could be reduced by user attention to maintenance. The following pages provide check lists to help you reach **ZERO FALSE ALARMS.**

ARMING THE ALARM USER

- Keep your alarm instruction booklet where it is handy. Make sure that you and others who need to have access to your home or business know where it is kept. It should go without saying that all concerned should read it completely, and if you have questions, don't hesitate to call your alarm service company.

- Make certain all persons using the system have been thoroughly trained in its operations. Don't forget to include housekeepers, neighbors, relatives, and others who visit your premises. **A good rule of thumb: If you trust someone with a key, be certain that person can deactivate your alarm.**

- Develop a routine for turning the system on and off. Remember to include the closing and locking of doors/windows, and the location of pets in your routine. Teach others using this system how you activate and deactivate your system. This simple step will save you time, money and some embarrassing moments.

- Keep the telephone number of your service supplier and your user I.D. code available to permit all users to abort an erroneous alarm.

- Ask a neighbor or friend to be a "designated responder" in the event your system is accidentally activated. Be sure this person has been trained to deactivate the system.

- Do the obvious repairs to your doors/windows to assure they close firmly and securely. A playful pet or even a gust of wind can activate some alarms. Additional protection can be obtained by installing deadbolts on doors and sash locks on windows.

KEEPING YOUR ALARM ARMED

Finding the "right" alarm system for your home requires some knowledge of your security needs and the systems available on the market. The best rule is to deal with a recognized company handling known brand names. Reliable companies will be able to recommend an alarm system appropriate to your needs. Further, a reliable company can be counted on to monitor and service your system once it is installed. The following features of a system can help reduce false alarms.

- Use equipment that can be easily tested from its control panel. Some systems have self test modes which tell you when some part or sector is not working correctly.
- Use a system which has a memory. This will permit it to remember which part caused it to malfunction.
- The door nearest the control panel should be on a time delay to permit adequate time to enter or exit without activating the alarm.
- Equipment bearing the Underwriters Laboratory seal has met industry standards.
- All alarm systems should be surge protected to avoid activation or damage in the event of an electrical line surge.
- A system should include a battery backup power source. This source should be able to maintain the system for a minimum of eight hours to prevent false alarms during power failures.
- Some systems can be activated from outside sources, such as radio waves, heat or air movement. Quality systems can be protected against false alarms from these sources.

FALSE ALARM NOTIFICATION

TO: _____
(PERMIT NUMBER/ADDRESS)

FROM: _____ BPST # _____
(POLICE OFFICER)

DATE: _____ TIME: _____

Today I responded to your premises on an alarm and upon inspection found no sign of illegal entry. False alarms are very costly to the Police. When officers are dispatched to an alarm, other calls for service are put on hold until the officers are clear. Fines are imposed for excessive false alarms.

Please contact your alarm company to repair any problems with your system or to get further instruction on its usage.

Clearly visible house numbers assist police, fire and medical personnel to find your home in case of an emergency.
