Portland Bureau of Planning and Sustainability, 1900 SW 4th Avenue, Suite 7100, Portland, Oregon 97201

The Bureau of Planning and Sustainability is committed to providing equal access to information and hearings. If you need special accommodation, translation or interpretation, please call 503-812-7700, the City’s TTY at 503-823-6868, or the Oregon Relay Service at 1-800-735-2900.

Willamette River Portland, Oregon

Introduction

The Willamette River is literally and figuratively the center of Portland and has been instrumental in shaping our city, economy, culture, natural systems and quality of life for centuries.

The State of Oregon recognized the importance of the river as it focused on development of the state planning goals in the early 1970s and adopted a specific goal just for the Willamette River. Oregon State Land Use Planning Goal 15 is intended to “protect, conserve, enhance and maintain the natural, scenic, historical, agricultural, economic and recreational qualities of lands along the Willamette River.”

Goal 15 stipulates that “when information on such items is not available through previous studies, information will be maintained by the agencies for those portions of the plan for which they are responsible. This requirement shall not limit units of government from collecting information on other items.”

Under the new statewide land use laws, local jurisdictions were required to inventory existing conditions along the riverbank to:

- Determine which lands were suitable or necessary for inclusion within the Willamette River Greenway Boundaries.
- Develop management plans and acquisition programs.

This document is an update to the Goal 15 inventory completed in 1986. Goal 15 specifically refers to the following items for inclusion in the inventory:

1. Agricultural lands as provided by Goal 3. This includes all land currently in farm use as defined by ORS Chapter 215.203(2).
2. All current aggregate excavation and processing sites, and all known extractable aggregate sources.
3. Current public recreation sites, including public access points to the river and hunting and fishing areas.
4. Historical and archaeological sites.
5. Timber resources.
6. Significant natural and scenic areas and vegetative cover.
7. Fish and wildlife habitats.
8. Areas of annual flooding and flood plains.
9. Land currently committed to industrial, commercial and residential uses.
10. The ownership of property including riparian rights.
11. Hydrological conditions.
12. Ecologically fragile areas.
13. Recreational needs as set forth in State Land Use Goal 8.
14. Other uses of land and water in or near the Greenway.
15. Acquisition areas.

Organization of the Document

This document is intended to serve as the City of Portland’s Goal 15, Willamette River Greenway Inventory. The maps in this inventory feature geographic representations of regulatory, land use, ownership, environmental, recreation, historic and cultural information. The City of Portland Bureau of Planning and Sustainability (BPS) Geographic Information System (GIS) team generated these maps.

Descriptions for the maps occur on pages 3 to 13. The descriptions summarize relevant reports and plans, which were adopted as part of the public record and provide additional inventory details. The maps are grouped at the end of the inventory on pages 14 to 31 for easy comparison.

Use of this Goal 15 Inventory

This Goal 15 inventory, along with other information, will be used to inform updates of City’s plans for the land along the Willamette River. The first use of this inventory will be during the update of the Central City Plan, currently underway and expected to be adopted in 2016. Updates for the north and south reaches of the Willamette River will follow. **Figure 1** show the Willamette River reaches.

Aerial Photograph

Map 1, on pages 14 and 15, is the 2013 aerial photographs of the land within the Willamette River Greenway overlay boundaries.

This composite digital aerial photograph of the corridor shows natural features, water bodies and urban development. The river’s edge is lined by urban development in the downtown area, with the inner city street grid and other transportation systems that expand outward from the river to the region. There are a few fragments of natural areas still intact. Most of the riverfront and bottomland in North and Northwest Portland are developed as industrial districts. West and southwest of the river corridor include less developed areas, reflecting the rugged topography of the Tualatin Mountains and public ownership of Forest Park.

Figure 1: Willamette River Reaches

Zoning

Every parcel of land in Portland has a base zone that establishes what uses and development are allowed. Some parcels also have additional regulations applied through overlay zones, for example, that are based on their location and overarching desired outcomes The Portland Zoning Code and the Portland Zoning Map define property characteristics overall. It is up to the property owner to use and develop property within the parameters allowed by zoning (and other policies and regulations).

Map 2, on pages 16 and 17, shows base zones and **Map 3**, on pages 18 and 19, depicts overlay zones. Combined, these maps address the following Goal 15 items:

- Item 1: Agricultural lands** – Multiple base zones allow or conditionally allow agricultural uses. Agricultural uses are not allowed in multi dwelling residential zones and in some single-dwelling and commercial zones.
- Item 2: Aggregate excavation and processing** – Mining is only allowed in industrial zones; it is a conditional use in open space and residential farm/forest zones. Manufacturing and production are allowed in all industrial and employment zones and limited in some commercial zones.
- Item 3: Public recreation and access** – Open spaces, which are public recreational areas, are depicted on the map. All other base zones allow, limit or conditionally allow parks and open space uses.
- Item 5: Timber Resources** – Timber harvesting is considered an agricultural use in the zoning code.
- Item 8: Industrial, commercial and residential uses** – Industrial, employment, commercial and residential zones are depicted on the map.
- Item 13: Other uses** – Institutional zones are depicted on the map.

Explanation of the Data on the Maps

Base Zones

The source of this information is the Bureau of Planning and Sustainability’s GIS zoning data (March 2014), which is used for Portland’s official zoning maps. All properties are mapped with base zone designations that fall into the general categories of single and multi dwelling residential, commercial, industrial, employment and open space. These base zone groupings comprise more specific categories listed in **Table 1**. Zoning designations are implemented through the Portland Zoning Code, which sets allowed development, density and design standards for new development and property alterations.

Table 1: Generalized Base Zone Sub-Categories

Open Space	Single Dwelling Residential	Multi dwelling Residential	Commercial	Employment	Industrial
Open Space (OS)	Farm and Forest (RF)	Low Density Multi dwelling (R2)	Mixed Commercial/ Residential (CM)	General Employment 1 (EG1)	General Industrial 1 (IG1)
	Limited Single Dwelling (R20)	Medium Density Multi dwelling (R1)	Storefront Commercial (CS)	General Employment 2 (EG2)	General Industrial 2 (IG2)
	Low Density Single Dwelling (R10)	High Density Multi dwelling (RH)	General Commercial (CG)	Central Employment (EX)	Heavy Industrial (IH)
	High Density Single Dwelling (R5)	Central Residential (RX)	Central Commercial (CX)	Attached Residential (R2.5)	Institutional/Residential (IR)

Each base zone has a general land use specification but also permits other uses. For example, agricultural uses are allowed within industrial zones. The base zone map does not represent existing land uses, rather the desired land use pattern set out in the goals and policies of Portland’s Comprehensive Plan (1999). Appendix A presents tables that specify the allowed, limited, conditionally allowed and prohibited land uses within each base zone.

Table 2 shows the acreages of zones within each reach. The predominant zoning in the North Reach is industrial. In the Central Reach the predominant zones are commercial and multi dwelling residential. And in the South Reach the predominant zoning is open space. Figure 2 summarizes the total zoning in the Willamette Greenway. Portions of the river are not zoned.

Table 2: Acres per Zone by Willamette River Reach

Zone	North Reach	Central Reach	South Reach	Total Acres
EG1		2.5		2.5
EG2	121.2	7.8	25.8	154.8
EX		19.5		19.5
IG1	4.4	21.0		25.5
IG2	159.1			159.1
IH	1771.0	16.0		1787.0
CM			6.9	6.9
CS			45.0	45.0
CG			11.1	11.1
CX		101.0		101.0
R1			35.2	35.2
RX		27.5		27.5
IR			0.7	0.7
R2	23.8		0.9	24.7
R2.5			0.4	0.4
R5	6.4		4.6	11.1
R10			0.7	0.7
R20			55.5	55.5
RF	14.3		50.2	64.5
RH			17.8	17.8
OS	170.3	32.8	402.0	605.1
Total Acres	2270.6	228.2	656.8	3155.6

Figure 2: Zoning in the Willamette Greenway

Overlay Zones

The source of this information is BPS’s GIS zoning data (March 2014), which is used for Portland’s official zoning maps. There are multiple overlay zones within the Willamette Greenway boundary; however, only the overlay zones that related to the Goal 15 inventory items are included on Map 3. Overlay zones are applied in conjunction with base zones. The overlay zone regulations are defined in the Portland Zoning Code (Chapter 400). The overlay zones often overlap one another. The following overlay zones are represented along the Willamette River:

Greenway Overlay Zone

The Greenway Overlay Zones are intended to protect, conserve, enhance and maintain the natural, scenic, historical, economic, recreational qualities of the lands and water along the Willamette River. The greenway overlay zones as described below include: river natural, river general, river recreational, river industrial and river water quality.

- **River Natural (n)** – Protects, conserves and enhances land of scenic quality or of significant importance as wildlife habitat.
- **River General (g)** – Allows for uses and development that are consistent with the base zoning that allow for public use and enjoyment of the waterfront, and enhance the river’s natural and scenic qualities.
- **River Recreational (r)** – Encourages river-dependent and river-related recreational uses that provide a variety of public access opportunities to and along the river, and enhances the river’s natural scenic qualities.
- **River Industrial (i)** – Encourages and promotes the development of river-dependent and river-related industries that strengthen the economic viability of Portland as a marine shipping and industrial harbor, while preserving and enhancing riparian habitat and providing public access where practical. Primary uses for these properties are river-dependent and river-related.
- **River Water Quality (q)** – Protects functional values of water quality resources by limiting or mitigating the impact of development in the setback. The (q) overlay overlaps the greenway overlay zones.

Table 3 shows the acreages of greenway overlay zones within each reach. Some properties have more than one overlay zone applied. The primary overlay zone in the North Reach is (i), which is the industrial zone. In the Central Reach the predominant overlay zone is the (g), which is the river general zone. In the South Reach, the predominant overlay zones are (n) and (g) which are often combined with (q).

Table 3: Greenway Overlay Zone Acres

Greenway Overlay Zones	North Reach	Central Reach	South Reach	Outside a Reach	Total
g	268	600	215	98	1,180
gq	265	7	204	0	476
i	3,635	2			3,637
iq	9				9
n	41		11		52
nq	38	0	561		600
r	11	104	22		137
rq	193		173		366
q	6		263		269
Total	4,467	713	1,450	98	6,727

Osprey at McCormick Pier

Environmental Overlay Zones

The environmental overlay zones protect natural resources and functional values identified by the City as providing public benefits. Environmental overlay zones are only applied along the Willamette River in unincorporated urban areas. Within Portland, greenway overlay zones protect natural resources along the Willamette River. The environmental overlay zones are as follows:

- **Environmental Protection Overlay Zone (p)** – Provides the highest level of protection to the most important resources and functional values identified by the City. Development in this zone is only approved in rare and unusual circumstances. There are 20 acres of (p) overlay along the Willamette River located at Harborton Wetlands at the confluence with Multnomah Channel and across from Elk Rock Island.
- **Environmental Conservation Overlay Zone (c)** – Conserves important resources and functional values in areas where they can be protected while allowing environmentally sensitive urban development. There are 20 acres of (c) overlay along the Willamette River’s South Reach.

Scenic Resource Overlay Zone

The Scenic Resource Overlay Zone, symbolized by an (s) on the zoning map, is used to implement the policies of Portland’s Scenic Resources Protection Plan (1991). It identifies where specific development standards for view corridors and scenic corridors are applied in relation to new development or redevelopment. There are 333 acres of (s) overlay in the greenway overlay zones; 232 acres in the North Reach, 60 acres in the Central Reach and 41 acres in the South Reach.

Land Uses

The general existing land uses along the Willamette River are depicted in **Map 4** on pages 20 and 21. This map shows how the land is currently being used as compared with the zoning map, which shows the desired land uses. Map 4 provides information about the following Goal 15 items:

- Item 1: Agricultural lands** – No land within the Willamette Greenway is currently being used for agricultural purposes. (Also see section on Zoning for a description of zones that allow agricultural uses.)
- Item 2: Aggregate excavation and processing** – Industrial uses that are specifically related to aggregate excavation or aggregate processing are noted on the maps.
- Item 3: Public recreation and access** – Parks and open spaces are public recreation areas that provide public access to the Willamette River. (Also see section on Recreation for information about trails, viewpoints and recreational needs.)
- Item 5: Timber resources** – No land within the Willamette Greenway is currently being used for timber resources. (Also see section on Zoning for a description of zones that allow farm/forest uses.)
- Item 8: Industrial, commercial and residential uses** – These uses are clearly depicted on the Land Uses map.
- Item 13: Other uses** – Other uses shown on the Land Uses map include office, institutional, utilities, vacant and other.

Explanation of the Data on the Maps

Land Uses

The data was derived from Multnomah County tax assessor data and updated by BPS to reflect current land uses. Primary uses are depicted on the map, while accessory uses are included under the primary use. For example, a parking lot that serves as accessory to a restaurant is categorized as commercial. **Table 4** explains what specific uses are included in each generalized land use category.

Table 4: Land Uses within General Land Use Categories

Category	Land Uses
Industrial	Prevalent uses along the river: general industrial, marine terminal, truck terminal, distribution, warehouse, wholesale, special purpose industrial. Other uses: special purpose industrial, industrial office, mini storage, multi-story storage, showroom.
Aggregate Excavation / Processing	Asphalt production, cement/concrete production, sand/gravel extraction.
Vehicle	Car wash, automobile dealership, gas/oil station, automobile services center.
Commercial	Prevalent uses along the river: office, commercial condominium, garage/parking structure, parking lot, restaurant, store. Other uses: bank, bowling alley, funeral home, general shop, health club, hotel, skating rink, lumber yard, medical office, motel, tavern, theater.
Institutional	Foster care, cemetery/mausoleum, church, day care, fraternal organization, adult home, nursing home, university, public building.
Multi dwelling Residential	Prevalent uses along the river: Apartments, condominiums. Other uses: attached housing, manufactured home park.
Single Dwelling Residential	Detached housing, semi-detached housing.
Parks and Open Space	Park, golf course.
Utility	Power lines, natural gas pipes, pump stations.
Right of Way	Rail road, state highway.
Vacant	Vacant.
Other	Captures land uses that don't fit under one of the other categories. For example, Centennial Mills is owned by the Portland Development Commission, it currently is not being used (has not land use) and it is not vacant; therefore, it is <i>other</i> .

Swan Island Industry

Downtown Portland

Riverfront Condominiums

Figure 3: Percent of Generalized Land Uses

Table 5 summarizes the acres of each land use category by reach. In the North Reach, the predominant land use is industrial. Industrial uses that are located within the Willamette Greenway industrial overlay zone (i) are river-dependent or river-related uses. Examples include marine cargo terminals, ship repair yards, barge services, dredge facilities and U.S. Coast Guard facilities.

In the Central Reach, the predominant land use is commercial, multi dwelling residential, parks and open space, industrial and vacant. Examples of land uses found in the Central Reach include condominiums and apartments and Tom McCall Waterfront Park.

In the South Reach the predominant land use is parks and open space, including Ross Island, Oaks Bottom and Powers Marine. There are also commercial, industrial and residential uses.

Although agriculture and timber uses are allowed in most of the base zones, there are no agriculture or timber land uses in the Willamette Greenway.

Table 5: Acres of Generalized Land Uses

Land Use Category	North Reach	Central Reach	South Reach	Total
Aggregate Excavation / Processing	90	3	51	144
Industrial	1,605	30	85	1,719
Vehicle	9		2	10
Commercial	36	55	80	171
Institutional	39	10	2	50
Multi dwelling Residential	0	36	44	80
Single Dwelling Residential	2		50	52
Parks & Open Space	150	35	295	479
Utility	89	2		91
Right of Way	1			1
Vacant	238	47	48	334
Other	13	12	1	26
Total	2,271	228	657	3,155

Ownership

The property ownership shown on **Map 5**, on pages 22 and 23, and the list of owners in Appendix B provide information about the following Goal 15 items:

- Item 9: Ownership of property** – A list of all property owners is provided and corresponds with the numbers on the map.
- Item 10: Riparian rights** – For the purposes of this inventory, any property that has land located at or below the ordinary high water mark of the Willamette River is considered to have a riparian right. A list of properties considered to have a riparian right is provided in Appendix C.

Explanation of the Data on the Maps

Ownership

The data was derived from Multnomah County tax assessor data. The primary property owners are included in the list associated with Map 6. In some cases there is a second or third owner; however, those names are not included in the list. **Table 6** presents the top 10 private property owners in the North, Central and South Reach, while **Table 7** presents the top 10 public property owners. The largest property owners include the Port of Portland, City of Portland, Union Pacific Railroad and Metro as public owners and Evraz Inc, Ross Island Sand and Gravel, Shipyard Commerce Center and University of Portland as private owners. See Appendix B for the complete list of property owners.

Oregon Museum of Science and Industry (OMSI)

Table 6: Top 10 Private Property Owners by Reach

	Map ID	Owner	Acres
North Reach	91	Evraz Inc., NA	136
	263	Shipyard Commerce Center LLC	127
	258	Schnitzer Steel Industries Inc.	101
	229	Portland General Electric	76
	31	Atofina Chemicals Inc.	60
	306	University of Portland	59
	113	Gunderson Inc.	55
	267	Siltronic Corp.	54
	300	Time Oil Co.	43
	103	Front Avenue LLC	42
Central Reach	201	Oregon Health and Sciences University	32
	329	ZRZ Realty Co.	17
	174	McCormick Pier Condominium	11
	304	Union Pacific Railroad Co.	10
	298	The Realty Associates	7
	296	The Landing At Macadam LLC	6
	247	Riverplace Apartments LLC	6
	131	Holt Distressed Property	4

	228	City of Portland	261
	179	Metro	46
	205	State of Oregon	16
	302	Tri-County, Metro	14
	227	Port of Portland	5
	191	Multnomah County	3

Riparian Rights

For the purposes of the Willamette River Goal 15 inventory, riparian rights are defined as properties that have land at or below the ordinary high water mark of the Willamette River. Appendix C includes a list of all properties that are considered to have a riparian right.

River front properties

Natural Resources

This map series includes existing natural resources and how these areas rank in terms of providing natural resource function. **Map 6**, on pages 24 and 25, depicts natural resource features including rivers, streams, wetlands, flood area and vegetation. **Map 7**, on pages 26 and 27, shows existing features that receive a relative rank as providing riparian corridor functions or wildlife habitat. In addition to the maps, the City has a Natural Areas Acquisition Strategy (2006) that identifies priority resource types and locations for acquisition. Combined, the maps and the Natural Areas Acquisition Strategy address the following Goal 15 elements:

- Item 6: Significant natural areas, scenic areas and vegetative cover** – All features that receive a rank as providing natural resource functions are significant.
- Item 7: Fish and wildlife habitat** – The features are ranked for functions that relate directly to fish and wildlife habitat, such as food web and forest patch size. Therefore, all features that receive a rank provide fish and wildlife habitat.
- Item 11: Hydrologic conditions** – The bathymetry and floodplain represent hydrologic conditions of the Willamette River.
- Item 12: Ecologically fragile areas** – Special Habitat Areas are included on Map 7. These areas include unique, rare and declining habitat features in Portland.
- Item 15. Acquisition Areas** – The Natural Areas Acquisition Strategy identifies resource types and general locations as priority acquisition areas.

Explanation of the Data on the Maps

All of the data on maps 7 and 8 comes from the Natural Resources Inventory Update (June 2012), which was adopted by City Council in December 2012 as the factual basis for the Comprehensive Plan update. Table 8 presents a summary of the natural resource features in the Willamette River Greenway. The data is explained in the narrative following the table.

Table 8: Natural Resource Features by River Reach

Feature	North Reach	Central Reach	South Reach	Total
Total Land (acres)	4,467	713	1,548	6,727
River (miles/acres)	12.1 / 2,080	3.8 / 411	1.8 / 725	22.7 / 3,314
Stream/Drainageway (linear feet)	8,470	67	1,508	10,045
Wetlands (acres)	56	0	95	151
Flood Area (acres)*				
Vegetated (acres)	262	21	292	575
Non-vegetated (acres)	353	72	148	573
Open Water** (acres)	2,078	410	817	3,306
Vegetated Areas >= ½ acre (acres)+				
Forest (acres)	144	1	266	411
Woodland (acres)	88	10	67	166
Shrubland (acres)	123	10	48	181
Herbaceous (acres)	270	29	59	358

* The flood area includes the FEMA 100-year flood plain plus the adjusted 1996 flood inundation area.

** Open Water includes portions of the Willamette River.

+ The vegetation classifications are applied in accordance with the National Vegetation Classification System specifications developed by The Nature Conservancy. The data within the primary study area and within 300 feet of all open water bodies in Portland is draft and is currently being updated based on 2008 aerial photography.

Willamette River and Ross Island

Natural Resource Features

River Bathymetry

River depth, or bathymetry, is derived from the U.S. Army Corps of Engineers survey information (2011). The bathymetry is mapped from the ordinary high water mark along the river bank. Shallow water areas provide important habitat for water fowl and provide resting, feeding and hiding spots for migrating fish, including Endangered Species Act (ESA)-listed salmon.

Streams

Stream data is derived from Metro RLIS data and updated by BPS. The streams on the west side of the Willamette River flow through steep ravines on their way to the river. Most of these streams also pass through pipes or culverts before entering the river. On the east side, urban development has buried most of the streams once known to exist. The exceptions are the Columbia Slough, located in North Portland, and Johnson Creek, located in Southwest Portland. Both the Columbia Slough and Johnson Creek confluences provide habitat for ESA-listed fish.

Stephens Creek a tributary of Willamette

Wetlands

Wetland data is derived from the National Wetlands Inventory, maintained by the Oregon Division of State Lands. Wetland data is updated by BPS based on wetland delineations of federal, state or city permits. In the North and Central Reaches of the Willamette River there are few remaining wetlands; most have been filled for development. Notable exceptions are the Terminal 5 Forest Wetland and Harborton Wetlands, both located in North Portland. In the South Reach, Oaks Bottom is a large protected wetland within the floodplain. Wetlands are important habitat areas and provide a host of functions, including storing flood water, filtering pollutants and cycling nutrients.

Oaks Bottom

Flood Area

There are two sources for flood area data. The 100-year floodplain is derived from Federal Emergency Management Agency’s (FEMA) Flood Insurance Rate Maps used for the National Flood Insurance Program. The 1996 flood inundation area is derived from the U.S. Army Corps of Engineers digitized aerial maps of the 1996 flood in the Willamette Valley. The flood area in the Greenway overlays is largely contained within the Willamette River’s banks; however, there are locations where large floods can overtop the banks, including on the east side of the North Reach just south of the PGE power line corridor. Not only does the floodplain provide attenuation of flood water, but the vegetated floodplain provides functions like contribution of nutrients, structure and food to the river.

Vegetation

The vegetation data is derived from aerial photography and is maintained by BPS. Patches of contiguous vegetation that is at least ½ acre in size are mapped and classified as forest, woodland, shrubland or herbaceous. Depending on the vegetation type and proximity to a river, stream, wetland or flood area, the vegetation provides different functions like microclimate and shade, food web and trapping sediments. Forest and wetland patches 2 acres in size or larger also provide significant wildlife habitat.

Riparian Vegetation at University of Portland

Figure 4 summarizes the natural resource features within the greenway overlay zones. Roughly half of the area is the Willamette River. On land, more than half is developed, and the remainder is vegetated or contains wetlands.

Figure 4: Acres of Natural Resource Features

Natural Resource Ranks

Combined Relative Ranks

The Riparian Corridor and Wildlife Habitat GIS models are used to rank natural resource features based on the functions provided. The GIS models were adopted by the City Council as part of the factual basis for the Portland Comprehensive Plan Update and are constantly maintained by BPS. The combined ranks depict all features that provide at least one riparian corridor or wildlife habitat function (e.g., shade, nutrient cycling, food web, interior habitat area). The ranks are relative to each other, meaning a high ranked feature provides more functions than a medium ranked feature; and a low ranked feature provides more functions than a feature that receives no rank. Any feature that receives a rank of high, medium or low by the GIS models is a significant natural resource. Table 9 summarizes the acres of ranked natural resources within the Willamette River Greenway.

Table 9: Natural Resource Inventory Combined Relative Ranks (acres)

Relative Rank	North Reach	Central Reach	South Reach	Total
High	2,292	422	1,145	3,859
SHA (High)	39		13	53
Medium	243	39	145	427
Low	377	72	95	543
No Rank	1,515	180	149	1,845
Total	4,467	713	1,548	6,727

Special Habitat Areas

Special Habitat Areas (SHA) are features that are unique, rare or declining in Portland. The criteria for designating SHAs was adopted by City Council as part of the factual basis for the Portland Comprehensive Plan Update and is maintained by BPS. SHAs in the Greenway overlays include: habitat, like the Willamette River, critical to ESA-listed species; unique corridors that connect habitats such as the PGE power line corridor between the Willamette River and Smith and Bybee Wetlands; Ross Island, which provides habitat for migratory birds including bald eagle; Oaks Bottom, which is a complex of multiple habitats from wetland to oak to bottomland hardwood forest; and all Willamette River bridges, which can be used for nesting by peregrine falcons. Appendix D lists the criteria used to designate SHAs.

Peregrine falcon on bridge

Natural Area Acquisition Strategy

In 2006 the Portland City Council adopted a citywide Natural Area Acquisition Strategy prepared by the Bureau of Parks and Recreation. The acquisition strategy provides a vision for protecting a healthy connected system of natural areas in the city, outlining a general approach and highlighting priority actions to achieve that vision. The protected system of natural areas should consist of green ribbons along major waterways and feature large natural area parks and preserves, providing access to nature from neighborhoods and trails. The Bureau of Environmental Services partners with Parks and Recreation to acquire properties that have important watershed health and stormwater management benefits.

The acquisition strategy provides examples of the kinds of resources that should be considered for acquisition such as oak/madrone habitat remnants on the bluffs, riparian cottonwood and Oregon ash forests, and beaches and mudflats. The acquisition strategy identifies Harborton Wetlands, the South Rivergate Power Line Corridor, Ross Island, lands around Oaks Bottom and the western riverbank south of Powers Marine as priority acquisition areas.

Beach habitat at Powers Marine Park

Recreation

The **Recreation Map 8**, on pages 28 and 29, shows parks and open spaces, public docks and boat launches, scenic views and the Willamette Greenway and other trails, which are briefly described below. This section also summarizes recreational shortfalls touching on acquisition for recreational purposes and other needs. In total, the following Goal 15 items are covered:

- Item 3: Public recreation and access** – All parks and open spaces, the Willamette River, public docks and boat launches, and the Willamette Greenway trail are public recreation sites and provide access to the Willamette River.
- Item 6: Scenic areas** – Willamette Greenway viewpoints and view corridors and the scenic resources views and drives are the identified scenic areas.
- Item 13: Recreational needs** – The discussion summarizes recreational needs as set forth in Goal 8, and additional detail is provided in the plans that are referenced within the summary.
- Item 15: Acquisition areas** – The discussion summarizes acquisition areas, and additional detail is provided in the plans that are referenced within the summary.

Explanation of the Data on the Maps

Sellwood Park

Parks and Open Spaces

The data was derived from Multnomah County RLIS zoning and ownership data that is maintained by Portland Parks and Recreation. There are 13 parks and open spaces that currently provide public access to and along the Willamette River totaling nearly 480 acres. The City of Portland is the primary property owner and service provider, with a few properties owned by Metro and other government entities. From north to south these include Kelley Point Park, Cathedral Park, Willamette Cove, McCarthy Park, Eastbank Esplanade, Tom McCall Waterfront Park, South Waterfront Park, Willamette Park, Cottonwood Bay, Oaks Bottom, Butterfly Park, Sellwood Riverfront Park and Ira Powers Marine Park. These parks and open spaces represent diverse types of recreation, from passive to active, from river-related to non-river related. Examples of activities at these parks include boating, fishing, walking, birding, picnicking and spaces for community events like concerts. All take advantage of their location by the Willamette River. Some have specific plans (see Recreational Needs section below) that detail existing and future conditions, improvements and activities.

Willamette River, Public Docks and Boat Launches

The Willamette River is the largest open space in the Greenway Overlay Zone. The Willamette River is navigable and classified as *waters of the state*. The public has the right to use the river and land located below the ordinary high water mark, in accordance with state law. Public docks and boat launches are facilities that are nearly all owned or managed by the City to allow the public to access the Willamette River. Portland Parks and Recreation and BPS maintain the data identifying the location of public docks and boat launches. There are 13 publicly owned and/or maintained docks, ramps and boat launch areas that provide motorized and/or non-motorized watercraft river access. They are located at Cathedral Park, South Waterfront Park, Swan Island Lagoon, Eastbank Esplanade, Riverplace Marina, Willamette Park, Macadam Bay, McCarthy Park, Sellwood Riverfront Park, Staff Jennings and Butterfly Park. Other privately owned docks in Portland, which do not appear on the map, provide additional places for the public to launch watercrafts.

Riverplace Dock

Eastbank Esplanade Trail

Willamette Greenway Viewpoints and View Corridors

The Willamette Greenway Plan (1987) identifies viewpoints and view corridors. The plan identifies a number of locations where viewpoints are to be provided as part of new development projects. The purpose of the viewpoints is to furnish locations where the public can sit and enjoy nature and the built environment along the Willamette River. Viewpoints and view corridors are implemented through requirements in the Portland Zoning Code and the Willamette Greenway Plan Design Guidelines (part of the Willamette Greenway Plan document).

There are 23 rights-of-way designated as Greenway View Corridors. These corridors are intended to provide visual access to the river and allow the public to enjoy its scenic qualities even when at some distance from the river. Public rights-of-way that are identified as view corridors are protected.

Willamette Greenway Trail

Map 9 shows the Willamette Greenway Plan (1987) adopted trail alignment that appears in the official zoning maps and indicates which trail sections are built. The analysis of which segments are built is the result of a study done by Portland Parks and Recreation in 1999 and then updated in 2001. At that time Parks found that there are approximately 16 linear miles of built trail with an additional 9 linear miles of proposed trail (see Table 10). This information was updated in 2006 when City Council approved a Recreational Trails Strategy, a long-range regional trail system plan, which identifies gaps in the Willamette Greenway Trail system and makes eliminating these gaps a top priority. The existing trail segments can serve recreational and transportation purposes for walking, rolling and bicycling as well as visual and scenic access to the river. In some locations the trail provides physical access to the river.

Table 10: Willamette Greenway Trail

Trail Miles	North Reach	Central Reach	South Reach	Total
Built	2.5	6.5	6.7	15.7
Proposed	5.7	1.8	1.8	9.3
Grand Total	8.2	8.3	8.5	25.0

Scenic Resources Views and Drives

Scenic views and scenic drives are documented in the Scenic Resources Protection Plan (1991) and protect views of the city, mountains, bridges or the river. These view points and drives are generally located in parks or along public rights-of-way. There are other locations along public roads, from public rights-of-way or from bridges where there are views; however, because these are not protected they are not depicted on the map.

There are no parks, recreation and open spaces public acquisition sites shown on Map 9. The City of Portland is not currently actively acquiring property within the Willamette River Greenway. However, the City occasionally pursues acquisitions as opportunities arise or properties are offered for sale or transfer.

Recreational Needs Summary

Oregon Statewide Planning Goal 8: Recreation Needs requires that jurisdictions inventory existing and future demand by citizens and visitors for recreational areas, facilities and opportunities, and complete planning to address recreational needs. The City was acknowledged by the State for compliance with Goal 8 in 1981.

In addition to compliance with Goal 8, the City has completed citywide, geographically based and resource-specific plans that address the recreational needs of community members and visitors within the Willamette River Greenway. All documents were developed with public participation and subsequent approval by City Council. The plans provide recommendations to the City and its partners for future recreational improvements and potential acquisitions. For acquisition, the emphasis is on additional land acquisition in conjunction with existing parks and open space resources, completion of the Willamette Greenway trail, and the creation of new parks facilities and activities especially in the downtown core. Below is a summary of the recreational needs identified within each of the relevant city plans.

Greenway trail on Swan Island

Vision 2020 Plan

The Vision 2020 Plan (2001) is the result of a comprehensive, long-range citywide review of parks, recreation and open space facilities and services. The vision sets targets and levels of service for all parks and recreation facilities and services, taking into account existing and future population demand. The vision lists recommendations for recreational lands, facilities and services by geographic district to achieve the desired level of services citywide in the next 20 years. The recommendations that relate to the Willamette River Greenway include:

- Pursue all opportunities to provide parks and recreation services along the rivers.
- Acquire sufficient land to protect existing resources along the rivers.
- Complete the Willamette Greenway Trail and develop a connected system of parks, trails and facilities.
- Develop convenient and appropriate access to major resource areas (e.g. Willamette River) and provide pedestrian and bike connections from the Willamette River Greenway to adjacent neighborhoods and districts.
- Conduct park planning for Tom McCall Waterfront Park.
- Expand recreation opportunities on both sides of the river and develop new parks, especially in the downtown core and as part of new development.
- Complete repairs and renovations at parks located within the Willamette River Greenway.
- Improve and manage natural resources at parks and open spaces within the Willamette River Greenway.
- Develop and improve river-related recreation opportunities along the Willamette River, especially between the Burnside Bridge and the city limits.
- Include a light watercraft center and a Willamette River Education Center.

The Portland Parks Foundation completed a Parks 2020 Vision Progress Report (2009) that evaluated the City’s success at implementing the *Vision 2020 Plan* with its partners. The report highlighted that the City is making progress in meeting its goals for parks, recreation, open spaces facilities and services, but there are still many investments and improvements to be made.

Approved Recreation and Natural Resource Master Plans

The plans listed below document specific recommendations for public recreation properties within the Willamette River Greenway. In general, these plans call for improving existing parks, recreation facilities, trails and open spaces to maintain and increase access to and along the Willamette River. Below is a summary of recommendations provided by the plans:

North Portland Greenway Trail Alignment Plan (2013)

- Establish a 10.5 mile trail alignment corridor from Eastbank Esplanade to Kelley Point Park, developed in segments with estimated implementation costs.

Willamette Park Redevelopment and Phasing Plan (2012)

- Develop a long-term concept and a short-term improvement plan to enhance this riverfront park, including but not limited to improved park circulation, riverbank restoration and increased access to the water, (e.g. new boat launch).

Willamette Cove Trail Refinement Report (2010)

- Establish a multi-use Willamette Greenway Trail alignment through the natural area.

Cathedral Park Master Plan (2009)

- Upgrade and renovate park features and amenities, including but not limited to creating universally accessible pathways and providing a light watercraft launch.

Governor Tom McCall Waterfront Park Master Plan (2003)

- Enhance access to the river and improve public spaces for public enjoyment and event use.

Oaks Bottom Wildlife Refuge Master Plan (1988)

- This natural resource management plan addresses Improving public accessibility and alignments of trails and viewpoints.

Other Relevant Plans and Reports

Other plans that assess recreational needs and make recommendations for improvements within the Willamette River Greenway are listed below. A summary of recommendations provided by the plans:

River Recreation Strategy – Public Boating Facilities (2012)

- A vision for Willamette River water-based recreation and strategies for enhancing river-recreation,(e.g. improvements to specific boat docks).

Recreational Trail Strategy (2006)

- Prioritizing trail implementation to eliminate gaps in the Willamette River Greenway Trail; identifies possible funding mechanisms.

Willamette Greenway Plan (1987)

- Policies, a concept and land use controls that define the Willamette River Greenway, including the Greenway Trail, viewpoints and view corridors, and access paths.

Historic and Cultural Resources

Sites listed in the Historic Resources Inventory, historic landmarks and historic districts are shown on **Map 9** on pages 30 and 31. In addition to the maps, the Cultural Resources Analysis Report provides a description of the cultural resources in the Willamette River Greenway. Combined, the maps and summary of cultural resources address the following Goal 15 items:

- Item 4: Historical and archaeological sites** – Historic landmarks and districts are shown on the map. There are no archaeological sites in the Willamette Greenway; cultural resources are described in text.
- Item 15: Acquisition areas** – The City has not identified any historic or cultural sites or structures for acquisition.

Explanation of the Data on the Maps

Historic Resource Inventory

The data was derived the 1984 citywide Historic Resources Inventory (HRI). The last update to the HRI data was in 1984. This inventory of potential resources of historic and archaeological significance, including properties within the Willamette River Greenway, was adopted by the Portland Historic Landmarks Commission. Being listed in the HRI is not a true historic designation. Since 1984, dozens of properties have been removed from the list through property owner requests and other circumstances including (re)development. Inventoried sites do not have regulatory protections, other than a 120-day demolition delay period. See Appendix E for the list of Historic Resources Inventory sites within the Willamette River Greenway Overlay Zones.

Historic Districts

The data was derived from the federal National Register of Historic Places. The Oregon State Historic Preservation Office (SHPO) maintains a statewide database of National Register properties. In the Willamette River Greenway area there are two historic districts: Skidmore/Old Town and Yamhill. The former is also designated as a National Historic Landmark. Given the historic significance of these districts, the City adopted specific zoning code regulations and design review guidelines and requires land use reviews and decision-making hearings for properties where alterations or redevelopment are proposed.

Historic Landmarks

There are two types of historic landmarks; local or “Portland” landmarks designated by the City and National Register properties. The landmarks data was derived from the National Register of Historic Places and the City of Portland records. The City requires land use reviews and has zoning regulations for specific alterations and redevelopment associated with historic landmarks. Local and National Register historic landmarks are generally treated the same in the zoning code, with the notable exception of demolition review, which only applies to National Register properties. Within the Willamette Greenway boundary, there are a variety of historic landmarks, including the St. Johns Bridge, the U.S. Blueback Submarine, the Albers Mills industrial building, a PGE Substation, St. John’s Episcopal Church, a pioneer church. See Appendix F for a list of historic landmarks within the Willamette River Greenway.

St. Johns Bridge, 1937

Skidmore / Oldtown District

Union Station, 1905

Cultural Resources

Cultural resources within the Willamette River Greenway are summarized in the Cultural Resources Analysis Report. The Cultural Resources Analysis Report is specifically about Native American cultural resources. Based on the report, there are no confirmed Native American archeological or cultural resource sites identified within the Willamette Greenway boundary. However, there is information about cultural resources found in the Cultural Resources Analysis Report (2005) prepared for the Portland Harbor as a requirement of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) also known as Superfund. A summary of the report findings is provided here.

There is no consensus regarding the first settlement in the Pacific Northwest, but it probably dates no later than 10,000 to 12,000 years ago. Artifacts have been found in the Willamette Valley that date back to this period of time. Settlement within the Portland Basin was highly likely by 6,400 to 10,000 years ago, but there is no conclusive evidence. There is evidence of Native American occupation along the Columbia River near the mouth of the Willamette River beginning about 3,000 years ago. There are no confirmed Native American archaeological sites within the Willamette Greenway; however, predictive modeling sited in the report shows that it is probable there were settlements in the Portland Harbor. In addition, information from artifact collectors (1946-72) support the likelihood of settlements along the Willamette River. Locations identified by collectors include the confluence of the Multnomah Channel and Willamette River, near the St. Johns Bridge, at the base of Waud Bluff and on Swan Island.

Chinook plank house, circa 1850

The Willamette River has cultural importance as a hunting and gathering area, for transportation and for trade. Some Tribes retain treaty rights to the salmon and other fish, not only as a source of food but also as part of their culture and spirituality. Wetlands are also of cultural importance, particularly because wetlands in the region support wapato, a major trade item between Chinookans in the Portland Basin and those at the coast. The only known location that currently supports wapato is a small riverine wetland located in the Swan Island Lagoon. Native vegetation in general has cultural importance. Native vegetation was gathered for food, tools and trade. The Willamette River Natural Resources Inventory, available in Appendix C, identifies areas with remnant native vegetation.

In addition to Native American cultural resources described, there are historic resources and likely historical archeological sites throughout the Willamette Greenway overlay boundary.

Appendix D: Special Habitat Area Criteria (page 9)

Code	Criteria
P	Area contains sensitive or unique plant populations
W	Wetlands and associated seeps, springs and streams that are part of the wetland complex
O	Native oak
B	Bottomland hardwood forest
I	Riverine island
D	River delta
M	Migratory stopover habitat
C	Corridor between patches or habitats
S	An at risk wildlife species uses the habitat area or feature on more than incidental basis to complete one or more life history stages
E	Elk migratory corridor
G	Upland habitat or landscape feature important to individual grassland-associated species or assemblages of grassland-associated species on more than an incidental basis
U	Resource or structure that provides critical or unique habitat function in natural or built environments (such as bridges or street trees)

P – Area contains sensitive or unique plant species

This criterion applies to areas containing the following plant species:

- 1. Those listed by USFWS or NOAA Fisheries as Endangered, Threatened, Proposed Endangered, or Proposed Threatened under the Endangered Species Act or by the ODA or ODFW under the
- 2. Oregon Endangered Species Act; OR
- 3. Species that receive an Oregon Natural Heritage rank 1, 2 or 3
 - a. 1 = Critically imperiled because of extreme rarity or especially vulnerable to extinction or extirpation
 - b. 2 = Imperiled because of extreme rarity or especially vulnerable to extinction or extirpation
 - c. 3 = Rare, uncommon or threatened, but not immediately imperiled

Not included are plant populations that are listed by USFWS/NOAA or ODA/ODFW as Candidate Taxa or Species of Concern, unless the plant population received an Oregon Natural Heritage rank of 1-3 or is a wetland indicator species. Also not included are those plant populations that received an Oregon Natural Heritage rank of 4 = not rare and apparently secure, but with cause for long-term concern, or 5 = demonstrably widespread and secure.

W – Wetlands and associated seeps, springs and streams that are part of a wetland complex

This criterion applies to selected wetlands, and associated seeps, springs and streams that provide critical watershed functions (i.e., water quality, hydrology, wildlife habitat, etc.) and are increasingly rare within Portland. SHAs include primarily those wetlands that:

- 1. Are connected to a stream or flood area;
- 2. Are part of a larger resource area, such as a wetland located within or adjacent to a forest; or
- 3. Provide connectivity between other high value habitats.

This criterion may incorporate constructed wetlands where the purpose of the wetland includes providing fish and wildlife habitat. Upland wetlands that are very small and are surrounded by development or intense land uses, such as golf courses, and certain water quality facilities are generally not designated as SHAs.

O – Native oak

The native oak criterion applies to areas that contain Oregon white oaks. Other tree species and vegetation, including invasive plants such as Himalayan blackberries, may be present.

B – Bottomland hardwood forest

This criterion applies to selected areas that contain remnant bottomland hardwood. Not all bottomland hardwood forests in the city are designated as a SHA. To be designated, an area must be considered unique, rare or declining within a particular watershed.

I – Riverine island

This criterion applies to islands or the portions of riverine islands that provide habitat for shorebirds, waterfowl, terns, gulls, Bald Eagles, river otter and other river/island-associated resident and/or migrating wildlife species. Beaches, mudflats, shoals and areas of large wood deposits are included along with other relevant resource features.

D – River delta

This criterion applies to river deltas that provide habitat for shorebirds, waterfowl, terns and gulls, Bald Eagles or other wildlife. The area shall contain beaches, mudflats and/or large wood deposits.

M – Migratory stopover habitat

This criterion is applied to vegetated areas and other landscape features (e.g., buttes) where use by migratory bird species has been documented, or is reasonably expected to occur, on more than an incidental basis. The criterion applies to areas that:

- 1. Provide nesting opportunities;
- 2. Provide food and resting opportunities;
- 3. Provide sufficient cover to reduce predation; and
- 4. Support a diverse assemblage or high concentration of migratory species

On more than an incidental basis means the identified species is documented to repeatedly or periodically use the habitat or feature.

Reasonably expected to occur generally applies to resource features that typically provide the functions listed above (e.g., buttes, ridge-topes/high elevation features, wetlands, mudflats, riparian areas or focal sites) and where local or regional technical experts state such uses by migratory birds is expected based on existing information or observations.

C – Corridor between patches or habitats

This criterion applies to vegetated areas that:

- 1. Provide connectivity between high value habitats including other Special Habitat Areas;
- 2. Provide connectivity between water bodies, riparian areas and upland habitats; or
- 3. Extend outward from another SHA to provide a wildlife movement corridor.

S – An at risk wildlife species uses the habitat area or feature on more than incidental basis to complete one or more life history stages

This criterion applies to areas with documented use by the following wildlife species (see Appendix 2: Special Status Fish and Wildlife Species in Portland):

- 1. Species listed by USFWS or NOAA Fisheries as:
 - a. LE - Listed Endangered
 - b. LT - Listed Threatened
 - c. PE - Proposed Endangered
 - d. PT - Proposed Threatened
 - e. SoC - Species of Concern
 - f. C - Candidate
 - g. Includes areas designated as Critical Habitats by NOAA Fisheries

2.

Species Listed by Oregon Department of Agriculture (ODA) or ODFW as:
- a.

LE - Listed Endangered
- b.

LT - Listed Threatened
- c.

SC - Critical
- d.

SV - Vulnerable
3.

Species that received an Oregon Natural Heritage rank or list 1, 2 or 3.
- a.

1 = Critically imperiled because of extreme rarity or especially vulnerable to extinction or extirpation
- b.

2 = Imperiled because of extreme rarity or especially vulnerable to extinction or extirpation
- c.

3 = Rare, uncommon or threatened, but not immediately imperiled;

Life cycle phases include but are not limited to:

- courtship, nesting, breeding
- rearing young, juvenile development (e.g. noise, light)
- feeding, foraging, hunting
- resting, basking, perching
- cover/protection from predators or disturbances
- dispersal, migration, migratory stopover
- over-wintering

This criterion may apply to individuals that make up a local population, pairs, colonies or a regional population.

On more than an incidental basis means the identified species is documented to repeatedly or periodically use the habitat or feature.

E – Elk migratory corridor

This criterion is applied to areas that ODFW has designated as elk migratory corridors.

G – Upland habitat or landscape feature important to individual grassland-associated species or assemblages of grassland-associated species on more than an incidental basis

This criterion is applied to areas that contain vegetative structure, topography or soil substrates that provide functions similar to a native meadow, prairie or grassland and where use by grassland-associated wildlife species has been documented. This criterion is also applied to areas that:

1.

Are part of a larger resource area, such as a grassy area located adjacent to a forest;
2.

Provide connectivity between other high value habitats; or
3.

Extend outward from an SHA to provide a wildlife movement corridor.

For the purposes of the G criterion, grassland-associated species include:

- Deer Mouse
- White-tailed Kite
- Gray-tailed Vol
- Short-eared Owl
- Camas Pocket Gopher
- Streaked Horned Lark
- Red Fox
- Northern Harrier
- Oregon Vesper Sparrow
- American Kestrel
- Savannah Sparrow
- Common Nighthawk
- Western Meadowlark
- Chipping Sparrow

On more than an incidental basis means the identified species is documented to repeatedly or periodically use the habitat or feature.

U – Resource or structure that provides critical or unique habitat function in natural or built environments

This criterion applies to resources or structures that are generally not accounted for by other criteria, and that provide a documented critical or unique habitat function. Examples include: bridges, chimneys, rock outcrops, groundwater upwelling areas, and street trees.

Note: Special Habitat Areas have been designated based on documented information about specific sites or areas. In addition, some of the SHAs reflect specific watershed conditions.
